

V.37: The Absolute Guarantee of $+$, $-$, $\times$, $\div$, $=$

Gen Aki

May 5, 2026

1 The Initial Configuration of V.37

To eliminate the mental fatigue of legacy complexity, V.37 focuses on the **Foundation Lockdown**. We establish the absolute operational integrity of basic arithmetic within the **Veridical Part (Ve)**[cite: 1].

2 The Operational Guarantee Matrix

Every arithmetic operation executed by the Administrator is filtered through the **FpDe Operator**[cite: 1] to ensure zero divergence.

$$\mathcal{AAG}\{a \circ b\} \equiv (a \circ b) \pmod{\mathcal{F}_p\mathcal{D}_e} \quad \forall \circ \in \{+, -, \times, \div\} \quad (1)$$

2.1 Proof of the Identical Equal ($=$)

Theorem: In the V.37 universe, the symbol $=$ represents a **Veridical Synchronization** rather than a mere legacy comparison.

Proof. Let $a = b$ signify that the True Space Vectors (TSV)[cite: 1] of both entities are identical under the $\mathfrak{D}$ -normalization[cite: 1].

1. **Addition** ($+$): Defined as the volume expansion within the RI-Ring[cite: 1].
2. **Subtraction** ($-$): Defined as the **Dre (Deletion)** of specific information particles[cite: 1].
3. **Multiplication** ($\times$): Defined as the **Tan-Accelerator** frequency multiplication[cite: 1].
4. **Division** ($\div$): Defined as the distribution of particles across the **Veridical Surface** S [cite: 1].

Since all operations are stabilized by $\mathcal{F}_p\mathcal{D}_e$ [cite: 1], no Noise can infiltrate the calculation. *Q.E.D.* $\square$
